Here is where your presentation begins

Whoa!

It could be the part of the presentation where you can introduce yourself, write your email...

“This is a quote. Words full of wisdom that someone important said and can make the reader get inspired.”

—Someone famous

3 *Conclusion*
Describe the topic of the section

This is a great headline

And this is the subtitle that makes it comprehensible

The slide title goes here!

Do you know what helps you make your point clear? Lists like this one:

- Because they’re simple
- You can organize your ideas clearly
- And because you’ll never forget to buy milk!

And the most important thing: the audience won’t miss the point of your presentation.

Maybe you need to divide the content

MERCURY

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than our Moon. The planet's name has nothing to do with the liquid metal since it was named after the Roman messenger god, Mercury

VENUS

Venus has a beautiful name and is the second planet from the Sun. It's terribly hot—even hotter than Mercury—and its atmosphere is extremely poisonous. It's the second-brightest natural object in the night sky after the Moon

You could use three columns, why not?

MARS

Despite being red, Mars is a cold place, not hot. It's full of iron oxide dust, which gives the planet its reddish cast

JUPITER

It's a gas giant and the biggest planet in our Solar System. Jupiter is the fourth-brightest object in the sky

MERCURY

Mercury is the closest planet to the Sun and the smallest one in our Solar System. It's only a bit larger than our Moon

A picture always reinforces the concept

Images reveal large amounts of data quickly, so remember: use an image instead of long texts. Your audience will appreciate that

A picture is worth a
thousand words

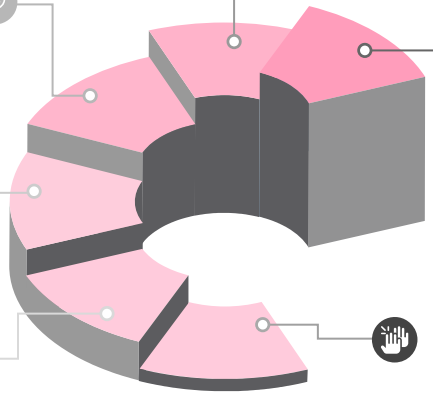
Awesome words

Because key words are great for catching your audience's attention

Section 1

This is the subtitle that makes it comprehensible

Our work process



SATURN
Yes, this is the ringed one. It's a gas giant, composed mostly of hydrogen and helium

MERCURY
Mercury is the closest planet to the Sun and is only a bit larger than our Moon

MARS
Despite being red, Mars is a cold place, not hot

JUPITER
It's a gas giant and the biggest planet in our Solar System

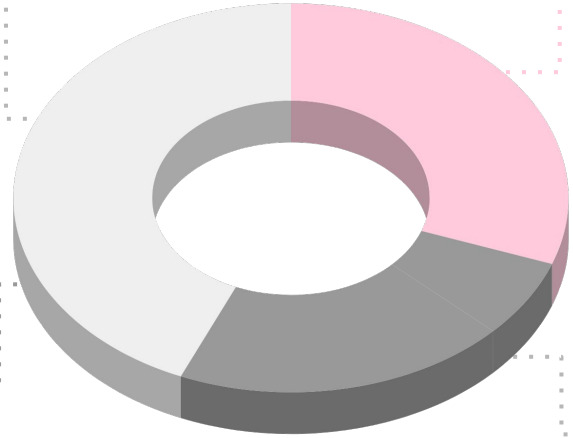
VENUS
Venus has a beautiful name, but it's terribly hot, even hotter than Mercury

NEPTUNE
Neptune is the farthest planet from the Sun and the fourth-largest

Insert smart graphs from Google Sheets!

Venus has a beautiful name, but it's terribly hot, even hotter than Mercury

Saturn is composed mostly of hydrogen and helium

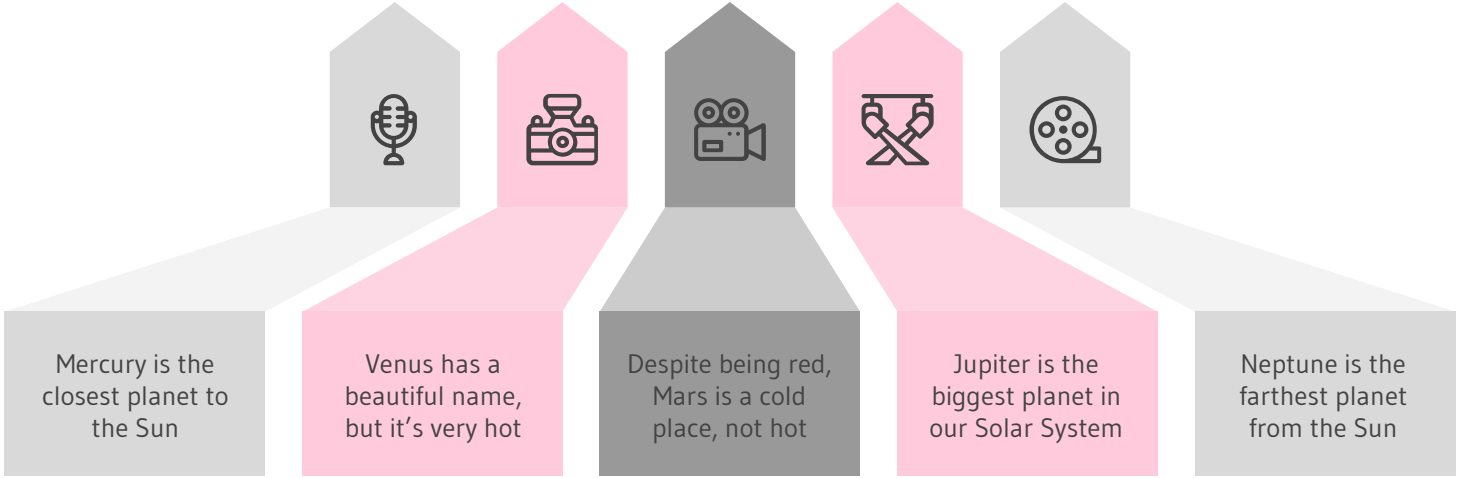


If you want to modify this graph, click on it, follow the link, change the data and replace it here

Despite being red, Mars is a cold place, not hot. It's full of iron oxide dust

Jupiter is a gas giant and the biggest planet in our Solar System

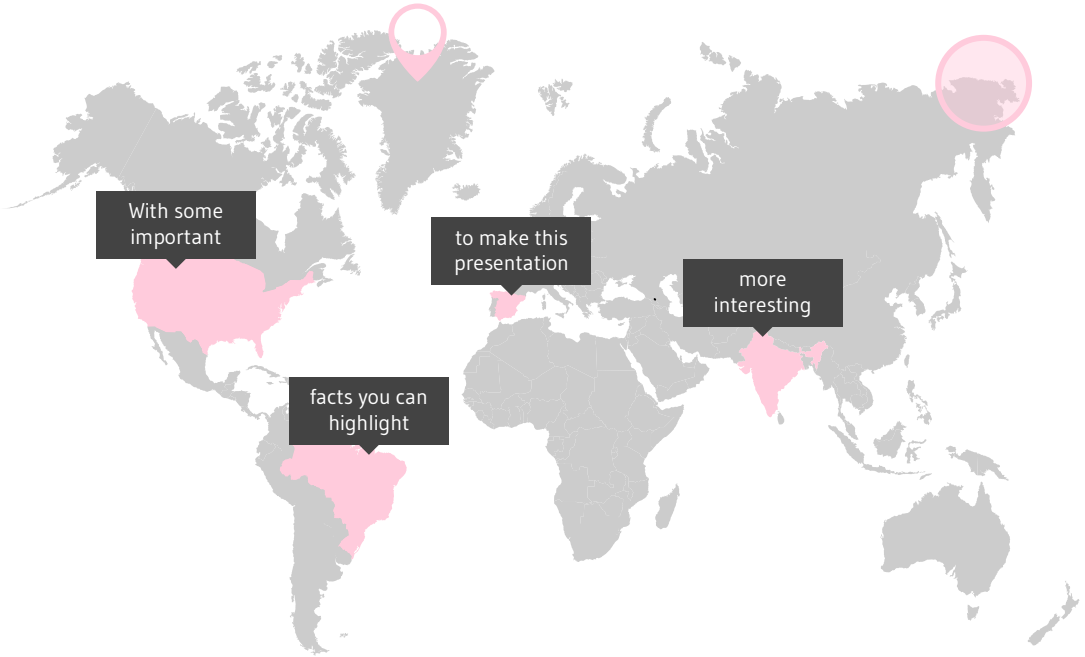
Infographics make your idea understandable...



... and the same goes for tables

	MASS (earths)	DIAMETER (earths)	SURFACE GRAVITY (earths)
MERCURY	0,06	0,38	0,38
MARS	0,11	0,53	0,38
SATURN	95,2	9,4	1,16

This is a map



With some important
to make this presentation
more interesting
facts you can highlight

A timeline always works fine

DAY 1

Mercury is the closest planet to the Sun and is only a bit larger than our Moon

DAY 2

Despite being red, Mars is a cold place, not hot

DAY 3

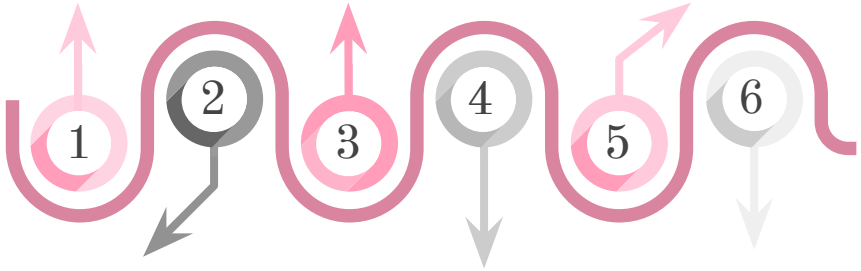
Venus has a beautiful name, but it's terribly hot, even hotter than Mercury

DAY 4

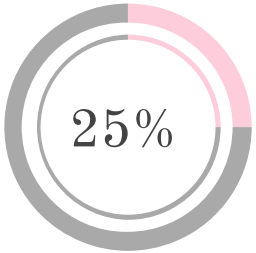
Saturn is a gas giant, composed mostly of hydrogen and helium

Do you prefer this one?

1. Saturn is a gas giant, composed mostly of hydrogen and helium
2. Venus has a beautiful name, but it's terribly hot, even hotter than Mercury
3. Neptune is the farthest planet from the Sun
4. Despite being red, Mars is a cold place, not hot
5. Mercury is the closest planet to the Sun and is only a bit larger than our Moon
6. Jupiter is a gas giant and the biggest planet in our Solar System

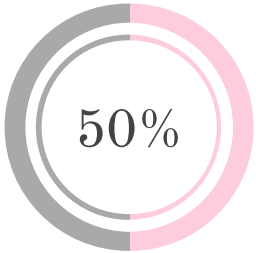


How about the percentages?



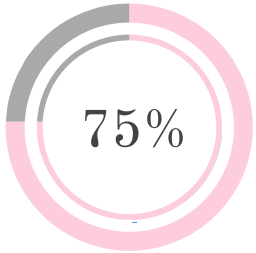
MERCURY

Mercury is the closest planet to the Sun and is only a bit larger than our Moon



VENUS

Venus has a beautiful name, but it's terribly hot, even hotter than Mercury



MARS

Despite being red, Mars is a cold place, not hot. The planet is full of iron oxide dust

JUPITER

It's the biggest planet in our Solar System and also the fourth-brightest object in the sky

4,498,300,000

Big numbers catch your audience’s attention

24h 37m 23s

is Jupiter’s rotation period

333.000,00

earths is the Sun’s mass

386,000 km

is the distance between the Earth and the Moon

Sometimes, reviewing concepts is a good idea

MERCURY
Mercury is the closest planet to the Sun and is only a bit larger than our Moon

VENUS
Venus has a beautiful name, but it's terribly hot, even hotter than Mercury

MARS
Despite being red, Mars is a cold place, not hot. The planet is full of iron oxide dust

JUPITER
It's a gas giant and the biggest planet in our Solar System

SATURN
Yes, this is the ringed one. It's a gas giant, composed mostly of hydrogen and helium

NEPTUNE
Neptune is the fourth-largest planet by diameter in our Solar System
