

A close-up photograph of a woman with voluminous, curly dark hair. She is smiling broadly, showing her teeth. The image is partially covered by a semi-transparent pink overlay that has a clipped corner on the right side. Two white diagonal lines are positioned at the corners of the pink overlay: one at the top-right and one at the bottom-left.

Here is where your
presentation begins

Whoa!

It could be the part of the presentation where you can introduce yourself, write your email...

“This is a quote. Words full of wisdom that someone important said and can make the reader get inspired.”

—Someone famous

Describe the topic of the section

This is a great headline

And this is the subtitle that makes it comprehensible

The slide title goes here!

Do you know what helps you make your point clear? Lists like this one:

- Because they're simple
- You can organize your ideas clearly
- And because you'll never forget to buy milk!

And the most important thing: the audience won't miss the point of your presentation.

Maybe you need to divide the content

MERCURY

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than our Moon. The planet's name has nothing to do with the liquid metal since it was named after the Roman messenger god, Mercury

VENUS

Venus has a beautiful name and is the second planet from the Sun. It's terribly hot—even hotter than Mercury—and its atmosphere is extremely poisonous. It's the second-brightest natural object in the night sky after the Moon

You could use three columns, why not?

MARS

Despite being red, Mars is a cold place, not hot. It's full of iron oxide dust, which gives the planet its reddish cast

JUPITER

It's a gas giant and the biggest planet in our Solar System. Jupiter is the fourth-brightest object in the sky

MERCURY

Mercury is the closest planet to the Sun and the smallest one in our Solar System. It's only a bit larger than our Moon

A picture always reinforces the concept

Images reveal large amounts of data quickly, so remember: use an image instead of long texts. Your audience will appreciate that

A picture is worth a
thousand words

Awesome words

Because key words are great for catching your audience's attention

Section 1

This is the subtitle that makes it
comprehensible

Our work process

Insert smart graphs from Google Sheets!

Venus has a beautiful name, but it's terribly hot, even hotter than Mercury

Saturn is composed mostly of hydrogen and helium

If you want to modify this graph, click on it, follow the link, change the data and replace it here

Despite being red, Mars is a cold place, not hot. It's full of iron oxide dust

Jupiter is a gas giant and the biggest planet in our Solar System

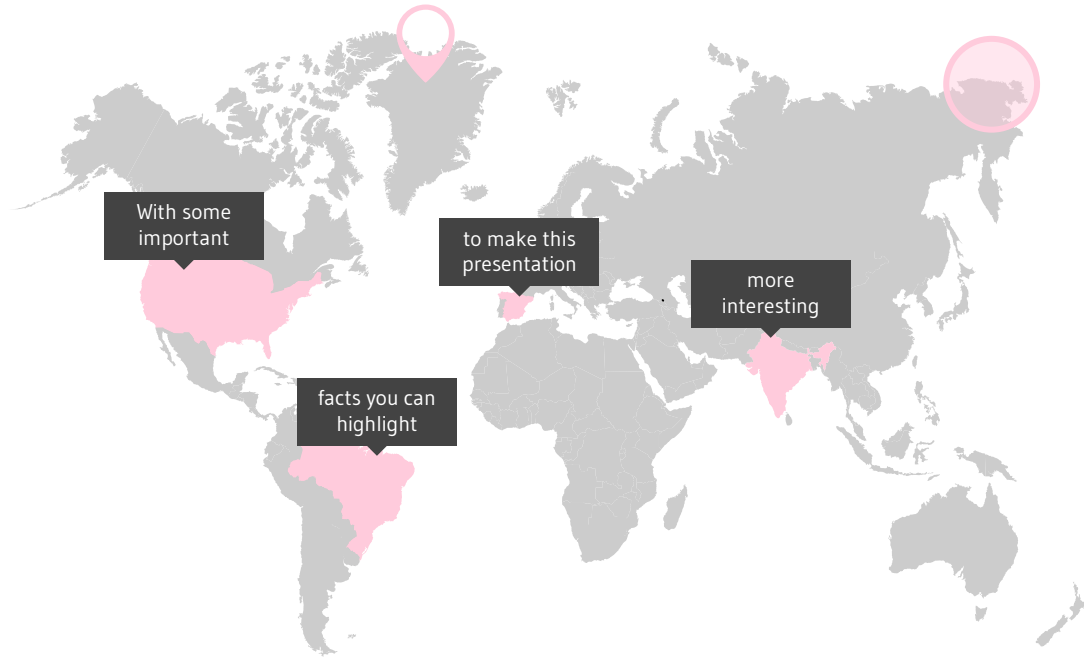

Infographics make your idea understandable...

... and the same goes for tables

	MASS (earths)	DIAMETER (earths)	SURFACE GRAVITY (earths)
MERCURY	0,06	0,38	0,38
MARS	0,11	0,53	0,38
SATURN	95,2	9,4	1,16

This is a map

With some
important

facts you can
highlight

to make this
presentation

more
interesting

A timeline always works fine

Do you prefer this one?

Saturn is a gas giant,
composed mostly of
hydrogen and helium

Neptune is the
farthest planet
from the Sun

Mercury is the closest planet
to the Sun and is only a bit
larger than our Moon

Venus has a beautiful
name, but it's terribly hot,
even hotter than Mercury

Despite being red,
Mars is a cold place,
not hot

Jupiter is a gas giant and
the biggest planet in our
Solar System

How about the percentages?

MERCURY

Mercury is the closest planet to the Sun and is only a bit larger than our Moon

VENUS

Venus has a beautiful name, but it's terribly hot, even hotter than Mercury

MARS

Despite being red, Mars is a cold place, not hot. The planet is full of iron oxide dust

JUPITER

It's the biggest planet in our Solar System and also the fourth-brightest object in the sky

4,498,300,000

Big numbers catch your audience's attention

24h 37m 23s

is Jupiter's rotation period

333.000,00

earths is the Sun's mass

386,000 km

is the distance between the Earth and the Moon

Sometimes, reviewing concepts is a good idea

MERCURY

Mercury is the closest planet to the Sun and is only a bit larger than our Moon

VENUS

Venus has a beautiful name, but it's terribly hot, even hotter than Mercury

MARS

Despite being red, Mars is a cold place, not hot. The planet is full of iron oxide dust

JUPITER

It's a gas giant and the biggest planet in our Solar System

SATURN

Yes, this is the ringed one. It's a gas giant, composed mostly of hydrogen and helium

NEPTUNE

Neptune is the fourth-largest planet by diameter in our Solar System
