

A close-up photograph of a woman with voluminous, curly dark hair. She is smiling broadly, showing her teeth. The image is partially covered by a semi-transparent pink overlay that has a clipped corner on the right side. Two white diagonal lines are positioned at the corners of the pink overlay: one at the top-right and one at the bottom-left.

Here is where your  
presentation begins

*Whoa!*

It could be the part of the presentation where you can introduce yourself, write your email...

**“This is a quote. Words full of wisdom that someone important said and can make the reader get inspired.”**

—Someone famous

# *Table of contents*

**1** *Introduction*  
Describe the topic of the section

**2** *Presentation*  
Describe the topic of the section

**3** *Conclusion*  
Describe the topic of the section

# This is a great headline

---

And this is the subtitle that makes it comprehensible

# *The slide title goes here!*

---

Do you know what helps you make your point clear? Lists like this one:

- Because they're simple
- You can organize your ideas clearly
- And because you'll never forget to buy milk!

And the most important thing: the audience won't miss the point of your presentation.

# *Maybe you need to divide the content*

---

## MERCURY

Mercury is the closest planet to the Sun and the smallest one in the Solar System—it's only a bit larger than our Moon. The planet's name has nothing to do with the liquid metal since it was named after the Roman messenger god, Mercury

## VENUS

Venus has a beautiful name and is the second planet from the Sun. It's terribly hot—even hotter than Mercury—and its atmosphere is extremely poisonous. It's the second-brightest natural object in the night sky after the Moon

# *You could use three columns, why not?*

---

## MARS

Despite being red, Mars is a cold place, not hot. It's full of iron oxide dust, which gives the planet its reddish cast

## JUPITER

It's a gas giant and the biggest planet in our Solar System. Jupiter is the fourth-brightest object in the sky

## MERCURY

Mercury is the closest planet to the Sun and the smallest one in our Solar System. It's only a bit larger than our Moon

# *A picture always reinforces the concept*

---

Images reveal large amounts of data quickly, so remember: use an image instead of long texts. Your audience will appreciate that

A picture is worth a  
thousand words

# *Awesome words*

Because key words are great for catching your audience's attention

# *Section 1*

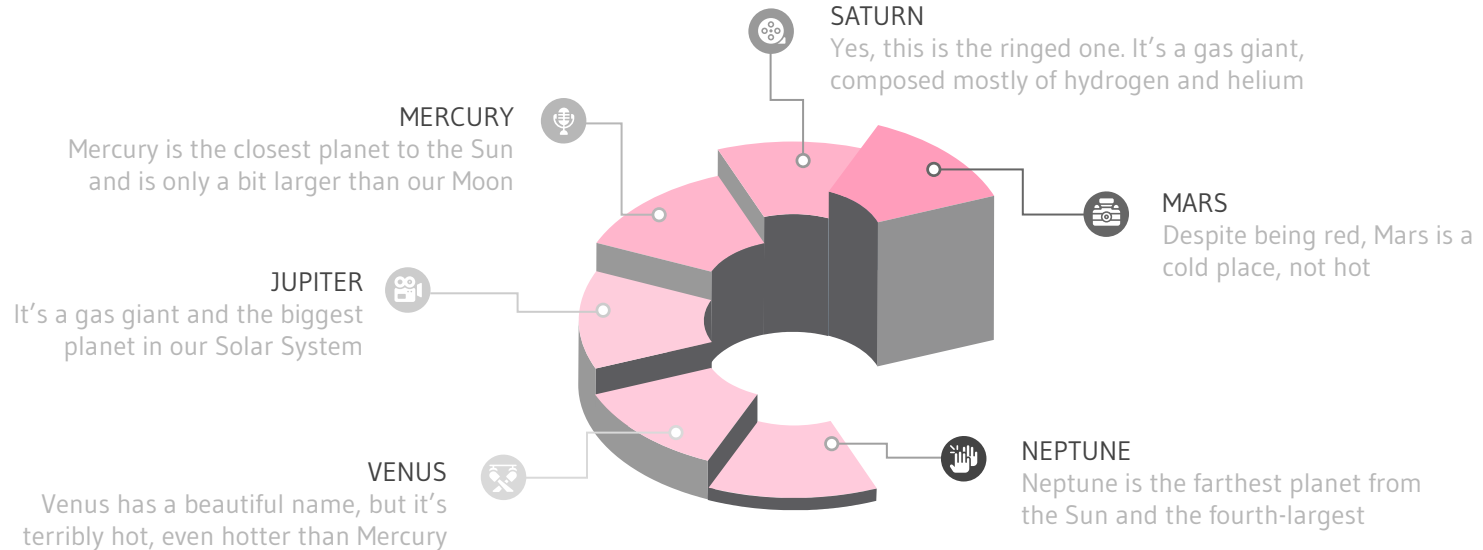

---

This is the subtitle that makes it  
comprehensible

# Our work process

---

# *Insert smart graphs from Google Sheets!*

Venus has a beautiful name, but it's terribly hot, even hotter than Mercury

Saturn is composed mostly of hydrogen and helium

If you want to modify this graph, click on it, follow the link, change the data and replace it here

Despite being red, Mars is a cold place, not hot. It's full of iron oxide dust

Jupiter is a gas giant and the biggest planet in our Solar System

# *Infographics make your idea understandable...*

---

*... and the same goes for tables*

---

|         | MASS<br>(earths) | DIAMETER<br>(earths) | SURFACE GRAVITY<br>(earths) |
|---------|------------------|----------------------|-----------------------------|
| MERCURY | 0,06             | 0,38                 | 0,38                        |
| MARS    | 0,11             | 0,53                 | 0,38                        |
| SATURN  | 95,2             | 9,4                  | 1,16                        |

# *This is a map*

---

# *A timeline always works fine*

---

# *Do you prefer this one?*

---

Saturn is a gas giant,  
composed mostly of  
hydrogen and helium

Neptune is the  
farthest planet  
from the Sun

Mercury is the closest planet  
to the Sun and is only a bit  
larger than our Moon

Venus has a beautiful  
name, but it's terribly hot,  
even hotter than Mercury

Despite being red,  
Mars is a cold place,  
not hot

Jupiter is a gas giant and  
the biggest planet in our  
Solar System

## *How about the percentages?*

---

### MERCURY

Mercury is the closest planet to the Sun and is only a bit larger than our Moon

### VENUS

Venus has a beautiful name, but it's terribly hot, even hotter than Mercury

### MARS

Despite being red, Mars is a cold place, not hot. The planet is full of iron oxide dust

### JUPITER

It's the biggest planet in our Solar System and also the fourth-brightest object in the sky

*4,498,300,000*

Big numbers catch your audience's attention

*24h 37m 23s*

is Jupiter's rotation period

*333.000,00*

earths is the Sun's mass

*386,000 km*

is the distance between the Earth and the Moon

# *Sometimes, reviewing concepts is a good idea*

---

## MERCURY

Mercury is the closest planet to the Sun and is only a bit larger than our Moon

## VENUS

Venus has a beautiful name, but it's terribly hot, even hotter than Mercury

## MARS

Despite being red, Mars is a cold place, not hot. The planet is full of iron oxide dust

## JUPITER

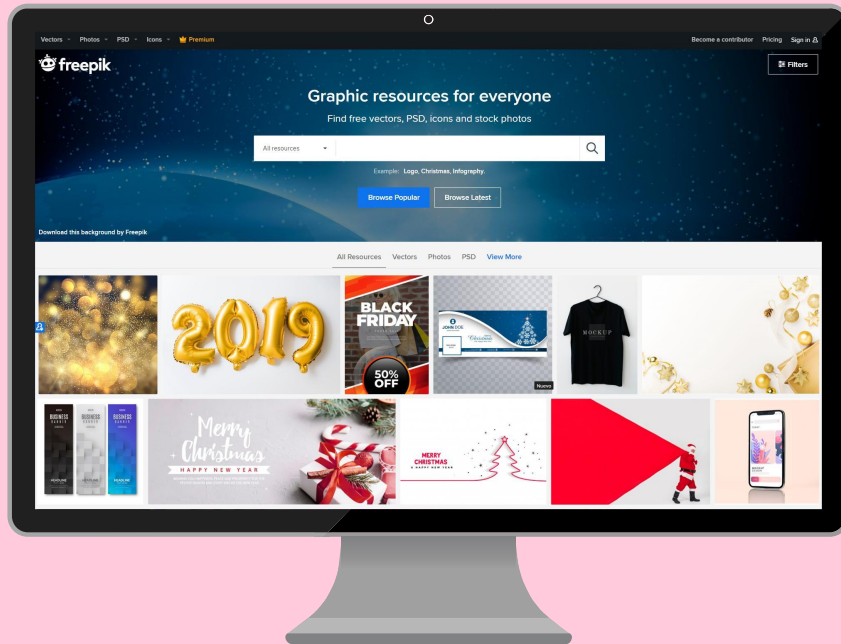

It's a gas giant and the biggest planet in our Solar System

## SATURN

Yes, this is the ringed one. It's a gas giant, composed mostly of hydrogen and helium

## NEPTUNE

Neptune is the fourth-largest planet by diameter in our Solar System
