

The background features a blue-toned grid with several faint, semi-transparent charts. On the left, there is a bar chart with vertical bars of varying heights. In the upper center, a line graph shows a fluctuating trend with data points connected by lines. On the right, another bar chart is visible, and at the bottom, a line graph shows a more stable trend. The overall aesthetic is that of a data visualization or financial report.

Passenger traffic at Moscow airports in August grew by almost 1.5 times compared to July

Tyurin Alexandr

3733802/02604

- Passenger traffic at Moscow airports in August amounted to 5.79 million people, which is almost 1.5 times higher than in July, follows from the data of the Federal Air Transport Agency.
- At the same time, in comparison with last year, passenger traffic has almost halved - last year in August, Moscow airports served 11 million people.
- From January to August, Moscow airports served 31.25 million passengers, which is 54.4% less than a year earlier. Sheremetyevo's passenger traffic amounted to 31.31 million people.

Why this happened and how it affects the business?

- It happened because of the partial removing of restrictions, occurred by the coronavirus pandemic, as a result, people are able to use airport services.
- The airport business will breathe freely and bring income until the next prohibitions won't be integrated.
