VOWEL SOUNDS

Monophthongs there is no change in the position of the organs of speech	[ɪ], [e], [æ], [ʌ], [ɒ], [ʊ], [ə], [ɑː], [ɔː], [ə:] fit, pet, lad, cup, hot, put, lett <u>er</u> , card, lord, firm
Diphthongs	[eɪ], [aɪ], [ɔɪ], [əʊ], [aʊ], [ɪə], [eə], [ʊə]
there is a change in the position	plate, kite, voice, rose, mouse, near,
of the organs of speech — a glide	fair, lure
from one vowel to another	
Diphthongoids	[i:], [u:]
there is a slight change in the positions of the organs of speech	feed, food

When the schwa sound is added to the diphthongs, a triphthong is formed:

[eɪə] (player), [aɪə] (fire), [ɔɪə] (royal), [əʊə] (lower), [aʊə] (power).

There is a glide from one vowel to another and then to a third one without interruption.

Vowels can be also classified according to the following characteristics: vowel height the highest point of the tongue in relation to the roof of the mouth (high [i:], mid [e], and low [æ])

vowel location — the section of the tongue that is raised during the production of the vowel (front [i:], central [ə], and back [ɒ]), and lip position — rounded or unrounded (rounded [ʊ] and unrounded [ə]).

Vowel length is also a phonemic feature in English (e.g. fit and feat). English vowels are traditionally divided into long ([i:], [u:], [\mathfrak{a} :], [\mathfrak{a} :], [\mathfrak{a} :]) and short ([\mathfrak{I}], [\mathfrak{v}], [\mathfrak{a}], [\mathfrak{e}], [\mathfrak{g}]).

The length of a vowel also depends on the phonetic context: if a vowel is <u>followed</u> <u>by a voiced consonant</u>, it is slightly <u>longer</u> than when it is followed by a voiceless consonant: the [i:] sound in feed is a bit longer compared to the [i:] sound in feat. Moreover, vowels are <u>normally longer before</u> <u>sonorants and at the end of words</u> than in other positions: firm, fee.

CONSONANT SOUNDS

Depending on the manner of articulation, consonant sounds can be classified in the following way:

Plosiv	es						
there	is	a	COI	mplete	blo	ckage	e of
the air	rstr	ea	m	follow	red	by	its
subse	que	ent	suc	dden re	leas	е	

[p], [b], [t], [d], [k], [g] pet, bet, to, do, cot, got

Fricatives there is a small space through which the airstream is able to

escape

[f], [v], [s], [z], [θ], [ð], [ʃ], [ʒ], [h] fan, van, soon, zoom, thin, this, ship, treasure, hot

CONSONANT SOUNDS

Depending on the manner of articulation, consonant sounds can be classified in the following way:

Affricatives there is a blockage of the airstream at the start, but then it is released slowly	[tʃ], [dʒ] chin, gin
Nasal sonorants	[m], [n], [ŋ]
the sound passes through the nasal	might, night, song
cavity	
Medial sonorants	[w], [r], [j] will, red, yet
the airstream passes by the central	will, red, yet
part of the tongue	
Lateral sonorant	[1]
the airstream passes by the sides	love, hill
of the tongue	

The Consonants of English

The following diagram gives an overview of the consonants of English for both Received Pronunciation (standard British English) and General American (standard American English).

CONSONANT SOUNDS

English consonant sounds can be also voiced [b], [d], [g], [v], [z], [ð], [σ], [dʒ], [m], [n], [η], [w], [r], [j], [l] and voiceless [p], [t], [k], [f], [s], [θ], [ʃ], [tʃ], [h].

For voiced consonants, the vocal cords vibrate, and there is no vibration when voiceless consonants are pronounced.

There are voiceless and voiced pairs of some consonants, for example: [t] - [d], [k] - [g], [p] - [b], [f] - [v], [s] - [z], [e] - [d], [f] - [d]. Such sounds are produced in the same way and by the same organs of speech (ten — den, pet — bet, fan — van, chin — gin). The only difference in their pronunciation is that we need to add or remove the voicing in the larynx.

Sounds w and y are sometimes called <u>semi-vowels</u>, because they are produced like vowels but function as consonants. They are similar to short vowel sounds, for example in yes and well.

English spelling is irregular and is characterized by various exceptions to the rules. Because of the influence of the French language, a lot of French orthographic conventions were adopted.

There are also borrowings from other languages, such as Greek, Latin, Italian, etc. Also, while pronunciation has changed a great deal over the past few centuries, the spelling system has remained approximately the same.

According to the reading and spelling rules, in the following commonly used words, the letters in brackets are usually not pronounced:

```
clim(b), com(b), dum(b);
mus(c)le;
han(d)kerchief, san(d)wich, We(d)nesday;
champa(g)ne, forei(g)n, si(g)n;
